IBEW Local 102 – Lighting the Path ~ Leading the Way

In New Jersey the work performed by IBEW electricians is all around us. Our craftsman built the electrical and communications infrastructure, our power plants and substations, wired the schools we attended as well as the offices and manufacturing plants our citizens have worked in for the past century.

What makes our local unique is our dedication to customizing our services to meet your needs. Typically a construction manager, a realtor or general contractor have insulated us from the business community. We have broken through these barriers and started meeting with developers and owners to creatively clear economic hurdles affecting the costs of construction. We have had tremendous success and captured seventy percent of our market.

Local 102 began serving the construction needs of New Jersey in 1900. Our business in the beginning was primarily building and maintaining Paterson, our nation's oldest industrial city and the adjacent areas along the Passaic River corridor. Over time this small group merged with several others from northern New Jersey to form what has become our local today. We are part of the International Brotherhood of Electrical Workers which services all of America and Canada.

We pride ourselves in delivering to our employers and end users the best electrical craftsman available. We have adapted to the

economics of these modern times and find we can be competitive in all venues. We perform over four million man hours of work per year in both electrical and communications in retail, commercial and industrial applications. We have streamlined our work rules to become as flexible as possible to further meet our customers' needs. We are a 3500 member temporary employment agency that services 300 electrical contractors. We are a human resources outsourcing company managing our own self insured health care as well as both defined benefit and contribution plans.

We operate our own 15,000 square foot training center and all our electricians go through mandatory re-training every three years and are OSHA30 certified. We recently developed a computer lab and are training in C.A.D. (computer aided design) and BIM (building imaging maintenance). From our humble roots wiring factories near the Great Falls in Paterson we have evolved into a high tech modern business.

Local 102 is our state's leading installer of solar projects. We are currently building many data centers and offer competitive programs for data center maintenance.

We are committed to our great state and to all the members of the business community. If you wish to meet with our Business Manager, Patrick Delle Cava or President, Bernard Corrigan call us at 973-887-1718 or visit our website at www.ibewlocal102.org.
